---

# Legal

---

# Legal

- Contrib agreement
- Makes sure OISF owns the code
- We need this to:
  - Defend Suricata in case of legal challenges
  - Reduce risk to our users (e.g. avoid netfilters current troubles)
  - Support Suricata dev through the consortium
- Contrib agreement at the website or part of custom agreements

---

# Code

---

# Features?

- Please probe if the team (and/or larger community) is interested in a feature before spending a lot of time on it
- We will not accept just any feature
- IRC: `#suricata` at `freenode.net`

*Worth* 1000.com

---

# Support Status (in progress)

- Ongoing effort to document what parts of the engine are supported by OISF, which by community
- Currently 'tier 1', 'tier 2', community
- Tier 1: core features on most important platforms
  - E.g. AF\_PACKET on Linux
- Tier 2: lesser used features and/or OS'
  - E.g. OpenBSD support

---

# Support Status (in progress)

- Community: contributed things that have limited use cases or are just very new
- [https://redmine.openinfosecfoundation.org/projects/suricata/wiki/Support\\_Status](https://redmine.openinfosecfoundation.org/projects/suricata/wiki/Support_Status)

---

# Code Quality

- Stick with our coding style (even if you don't like it)
- Documented on our redmine
- When in doubt, check with the dev team

---

# Branch to target

- Bug fixes should target the stable branch(es)
  - Master-3.2.x
- Features should target development branch
- Dev branch is not open all the time
- We unofficially use 'merge windows', but we need to improve the communication around this

---

# Commits

- Separate commits logically
- Don't mix too many things in a single commit
- No style fixes and other changes in a single commit
- Stick with correct formatting of commit messages (kernel style)
- Describe purpose and reason of change

---

# Docs!

- Documentation is part of github repo
- If you change behavior, doc it!

---

# Github & QA

---

# Github workflow

- Iterative process:
- Make new Pull Request & close old (if any)
- Feedback

---

# Github: pull request

- Template in place, please use that and be mindful of the formatting
- Describe your proposed changes
- Describe changes since your last PR on the same topic
- Add reference to redmine ticket
- Indicate what you need. Merge? Feedback? Testing? etc.

- I have read the contributing guide line <https://redmine.openinfosecfoundation.org/>
- I have signed the Open Information Security Foundation [ids.org/about/contribution-agreement/](https://openinfosecfoundation.org/about/contribution-agreement/)
- I have updated the user guide (in doc)

---

# Github: automated feedback

- Travis CI
- AppVeyor
- Tests: build, compile warnings, unittests, blacklisted functions
- On failure you should have all info to fix things on your own
- If you're a regular contributor, please enable Travis CI and AppVeyor on your own account as well (it's free)

---

# Github: review phase

- Using Github 'review' capabilities
- Me or team member(s) reviewing the diff
- Most of the time this means no actual testing yet
- Often leads to change requests that should go into new PR (+new branch)

---

# Github: manual QA

- Infamous 'PRscript' -> ETpro pcap/sid regression test
- More infamous "Victor's QA"
  - Lots of tests, code checkers, fuzzers, etc
- On failure we will try to share required info or test case where possible

Update of #2986

- I have read the contributing guide lines at <https://redmine.openinfosecfoundation.org/projects/suricata/wiki/Contributing>
- I have signed the Open Information Security Foundation contribution agreement at <https://suricata-ids.org/about/contribution-agreement/>
- I have updated the user guide (in doc/userguide/) to reflect the changes made (if applicable)

Link to redmine ticket: <https://redmine.openinfosecfoundation.org/issues/2253>

Describe changes:

- Optional output values as array for all keys or selected
- Documentation update

PRScript output (if applicable):

- PR regit: <https://buildbot.openinfosecfoundation.org/builders/regit/builds/347>
- PR regit-pcap: <https://buildbot.openinfosecfoundation.org/builders/regit-pcap/builds/131>

# Post-Merge

---

# Great, your code was accepted!

- Please stay involved to monitor how the change works
- Team will assign bug reports in this code to you
- Depending on feature and interaction support status would probably start at 'community'

---

**Thank you for  
(listening|contributing)**
